

BioSter—Miracle in Every Breath

Continuous Air & Surface Sterilization for Indoor Spaces

The World Changed

Before Corona, safety felt simple.

We trusted our immunity. We shared air, spaces, and surfaces without fear

Then the pandemic rewrote the rules.

It showed us that invisible threats can spread silently - through the air we breathe and the surfaces we touch

We trusted our immunity.

We trusted immunity. We shared air, spaces and surfaces without fear.

The Indoor Air Quality Crisis

The Hidden Danger

We spend 90% of our time indoors, yet indoor air is 5-10× more polluted than outdoor air. This invisible threat contains airborne pathogens, volatile organic compounds (VOCs), allergens, mold spores, and persistent odors that compromise health and productivity.

In our post-COVID world, populations face weakened immunity and heightened vulnerability to infections.

Airborne Transmission

- Respiratory droplets and aerosols
- Extended suspension in enclosed spaces
- HVAC recirculation amplifies spread

Surface Contamination

- Touch-point pathogen reservoirs
- Viable organisms persist for hours to days
- Cross-contamination via hands and objects

Dual pathways require simultaneous, continuous intervention strategies

Traditional purification & cleaning solutions, designed decades ago, are fundamentally inadequate for today's health challenges.

Everyday Work, Invisible Exposure

In almost every setting, people doing **routine work** are in **close contact** with others and the air they exhale:

Healthcare

Doctors providing consultations in small, closed rooms; nurses, surgeons and cleaners leaning over patients in ICUs/OTs and handling high-touch, contaminated surfaces.

Hospitality

Housekeepers, waiters and spa therapists working in rooms just vacated or crowded with guests, sharing the same limited air and surfaces.

Commercial & Retail

Office staff in long meetings, retail clerks and bank tellers serving a stream of customers, all sharing recirculated air and shared objects.

Education

Teachers, students and librarians spending hours in crowded classrooms, halls and libraries, surrounded by coughs, sneezes and shared materials.

Residential & Care

Caregivers, parents and family members in homes, nurseries and elderly care facilities, constantly in close contact while stirring up dust, allergens and microbes

Why Traditional Solutions Fall Short

Air Purifiers

Only trap particles instead of neutralizing them; no surface sterilization; dead zones in the room; filters can become breeding grounds; limited impact on viruses, VOCs and nano-aerosols.

Chemical Cleaning / Fumigation

Toxic and corrosive to equipment; requires room evacuation and strict handling; leaves harmful residues; protection is temporary and entirely dependent on how often people clean.

UV Lamps / UV-C Systems

Work only in direct line-of-sight and cannot reach shadowed areas; unsafe for continuous use around people; no air circulation benefit and effectiveness drops with poor maintenance.

Ionizers

Potential ozone and by-product generation; inconsistent real-world pathogen reduction; minimal impact on surfaces and difficult to verify performance.

Limitations of Current Solutions

 9000+ hours
operation

 zero secondary
pollution

 guaranteed service
& maintenance

 silent 24/7
operation

 no harmful
residues

Introducing BioSter

A Continuous 24/7 Sterilization System

Active, whole-room, medical-grade sterilization that works continuously while people are present.

BioSter represents a fundamental breakthrough in indoor air quality management, combining advanced photocatalytic technology with practical, safe operation in occupied spaces.

Bioster Technology

Revolutionary PCO Technology

UV-C activated titanium dioxide photocatalysis generates controlled reactive oxygen species

What It Solves

Continuous whole-room sterilization in occupied healthcare, commercial, and high-traffic spaces

Why It Matters

First system combining volumetric reach, molecular-level neutralization, and zero-ozone operation

99.9%

Pathogen Reduction

24/7

Continuous Operation

How BioSter Works

The Science Behind BioSter Photocatalytic Oxidation (PCO)

- BioSter harnesses the power of UV-C light combined with titanium dioxide nanoparticles to generate Reactive Oxygen Species (ROS).
- These powerful oxidizers neutralize viruses, bacteria, fungi, and VOCs at the molecular level.
- The result is complete pathogen inactivation without chemicals, ozone, or harmful byproducts.
- This technology is safe for humans, infants, and pets during continuous operation.

*ROS based Neutralization **results in H₂O and CO₂**

Active Sterilization: The BioSter Advantage

Complete Coverage

Reaches every corner of the room, including hard-to-access areas that traditional methods miss

Dual Action

Sterilizes both air and surfaces simultaneously for comprehensive protection

Continuous Operation

Works 24/7 in occupied spaces without requiring evacuation or downtime

Zero Chemicals

No chemical residues, no ozone emissions, completely safe for all occupants

Protection From

 Virus	 Fungus	 Formaldehyde	 Bacteria	 Odour
 Spores	 Pollen	 VOCs	 Ammonia	 Smoke

Proven Efficacy

BioSter's performance has been independently established across the Full spectrum of micro-organisms

Contaminant Type	Efficacy / Outcome
SARS-CoV-2 (COVID-19 virus)	99% reduction
Airborne & Surface Pathogens	Neutralized through active oxidation
Fungi & Molds	Inhibits spore formation and surface growth
VOCs (Volatile Organic Compounds)	Decomposed into harmless by-products

Validated by Premier Research & Healthcare Institutions

99.9% viral neutralization
across multiple pathogen
strains

SARS-CoV-2 elimination
under maximum biosafety
protocols

SUNSHINE
HOSPITALS

Clinical outcome
improvements: reduced
HAIs, faster recovery times

Complete bacteria and fungi
elimination in controlled
environments

Quality Management System
Certified – ISO 9001:2015

Bioster's effectiveness has been rigorously tested and validated by premier research institutions and healthcare facilities across multiple independent studies. These validations confirm the system's ability to neutralize the most challenging pathogens under real-world conditions.

Key Differentiators

24/7 Continuous Operation

Never stops protecting your environment, providing constant vigilance against pathogens day and night

Medical-Grade Disinfection

Meets the highest healthcare standards for pathogen elimination and air quality

IoT-Enabled Monitoring

Optional smart connectivity for real-time performance tracking and alerts

Zero Chemicals & Zero Ozone

Completely safe, non-toxic operation without harmful emissions or residues

Occupied Space Operation

Works safely while people are present—no evacuation or downtime required

Minimal Maintenance

Engineered for reliability with simple, low-frequency service requirements

Certified and Clinically Validated, Broad-Spectrum Protection

BioSter™ Advantage

BioSter™ goes beyond traditional air purification, delivering real sterilization of air and surfaces through scientifically validated, eco-friendly, and maintenance-efficient technology.

- It ensures safer, healthier, and cleaner indoor environments, truly embodying "Sunlight Science for Everyday Safety."

Protect's From

 Virus	 Fungus	 Formaldehyde	 Bacteria	 Odour
 Spores	 Pollen	 VOCs	 Ammonia	 Smoke

BioSter vs. Alternative Technologies

Feature	BioSter	Air Purifiers	UV Lamps	Fumigation	H2O2 Systems
Surface Sterilization	✓	✗	Limited	✓	✓
Air Sterilization	✓	Partial	Limited	✓	✓
Occupied Space Safe	✓	✓	✗	✗	✗
Chemical-Free	✓	✓	✓	✗	✗
Continuous Operation	✓	✓	Limited	✗	✗
Whole Room Coverage	✓	Limited	✗	✓	✓
Maintenance	Low	High	Medium	N/A	Medium

BioSter delivers comprehensive protection where other technologies compromise on safety, convenience, or effectiveness.

Applications Across Industries

Healthcare

Operating theaters, ICUs, bone marrow transplant units, NICUs, outpatient clinics, emergency departments

Education

Schools, colleges, universities, daycare centers, libraries, laboratories

Hospitality

Hotels, spas, restaurants, banquet halls, fitness centers, resort facilities

Commercial

Corporate offices, meeting rooms, call centers, retail spaces, financial institutions

Residential

Allergy-prone homes, elderly care facilities, nurseries, high-end apartments

Customer Testimonials

Office Manager

"Healthier and More Productive Workspaces"

Bioster has noticeably improved our air quality, creating a healthier and more productive environment for our team.

School Principal

"Cleaner, Safer Classrooms for Our Students"

Since installing Bioster, our classrooms feel fresher and absenteeism from allergies and infections has dropped significantly.

Hospital Administrator

"A Game-Changer for Hospital Hygiene"

Bioster has reduced airborne pathogens in our OTs, giving staff and patients greater confidence in hygiene standards.

Hotel Manager

"Unparalleled Luxury Experience for Guests"

Bioster keeps guest rooms fresh and clean, elevating our hospitality experience.

Celebrity Home

"Pure Comfort and Wellness at Home"

Bioster keeps my home fresh, quiet, and allergen-free — the perfect balance of technology and wellness.

Proven Results

- Sunshine Hospitals – Eliminated surface & airborne bacteria in ICUs
- KIMS Hospitals – Achieved nil infection rates in sterilized OTs
- ESIC Medical College – Proven effective against SARS-CoV-2 within 30 minutes (BSL-3 lab)

Trusted Where Clean Spaces Matters Most

Technical Specifications

Core Technology

- **Sterilization Method:** Nano-Photocatalytic Oxidation
- **UV-C Wavelength:** 254 nm
- **Catalyst:** Titanium Dioxide nanoparticles
- **UV Lamp Life:** 9,000+ operational hours

Build Quality

- **Enclosure:** Powder-coated metal construction
- **Dimensions (1000):** Compact design for versatile placement
- **Dimensions (2000):** Optimized for larger spaces
- **Weight:** Engineered for stability and portability

Performance

- **Pathogen Elimination:** 99%+ viruses, bacteria, fungi
- **VOC Reduction:** Significant reduction in volatile organic compounds
- **Operation:** Continuous 24/7 in occupied spaces
- **Noise Level:** Whisper-quiet operation
- **Power Consumption:** Energy-efficient design

Certifications & Compliance

- Safety certifications for occupied space use
- Environmental safety validated
- CE / ISO 9001:2015 quality management certified

Product Range

BioSter 1000

Coverage: Up to 1,000 sq ft

Ideal for: Clinics, small offices, home care settings, patient rooms

- 9,000+ hours UV life
- Metal enclosure
- HEPA + Carbon filtration

BioSter 2000

Coverage: Up to 2,000 sq ft

Ideal for: Operating theaters, ICUs, large conference rooms, restaurants

- 9,000+ hours UV life
- Robust metal construction
- Advanced filtration system

Custom Units

Coverage: Tailored to specification

Ideal for: Hospital wings, hotels, large commercial spaces, industrial facilities

- Engineered solutions
- Scalable deployment
- Central monitoring

Comprehensive Support & Service

We're With You Every Step

Free Site Assessment

No-obligation evaluation of your facility's needs

Demo Units Available

Experience BioSter performance before you commit

Deployment Planning

Detailed implementation roadmap tailored to your timeline

Warranty & Maintenance

Comprehensive coverage and preventive service programs

24/7 Technical Support

Expert assistance whenever you need it

The BioSter Installation Process

01

Site Assessment

Our experts evaluate your facility's specific needs, layout, and coverage requirements

02

Custom Solution Design

We develop a tailored deployment plan optimized for your space and budget

03

Professional Installation

Certified technicians install and configure your BioSter system with minimal disruption

04

Staff Training

Comprehensive training ensures your team can monitor and maintain the system

05

Ongoing Support

Dedicated customer service and preventive maintenance keep your system optimal
