

Robotics Center of Excellence for Innovation and Research (School Edition)

Empowering Schools with Robotics, AI & Hands-on STEM Learning

Why Robotics in Schools

Robotics education prepares students beyond textbooks by introducing them to **logic, experimentation, and innovation.**

Robotics in schools:

Builds future-ready technical and life skills

Enhances academic understanding through practical application

Encourages curiosity, confidence, and creativity

Promotes interdisciplinary learning across science, math, and technology

Aligns schools with global education and industry trends

Our Offerings

EduGenie Labs provides end-to-end robotics and STEM solutions for schools, including:

Age-appropriate
Robotics & STEM
Programs

Curriculum-aligned
robotics kits and
learning modules

Block-based and text-
based programming
(Python, C, etc.)

Teacher enablement,
training, and LMS
support

STEM events,
innovation challenges,
and hackathons

PROGRESSIVE KIT DEPLOYMENT

ELEMENTARY

Introductory robotics, sensory kits, logic & sequencing games

PRIMARY

Foundational robotics, coding platforms, simple electronics & Engineering kits

SECONDARY

Advanced robotics, AI/ML integration, Electronics & Circuitry kits & Drones

KITS OVERVIEW

Genie ZWB

Specification :

- Screen-free coding with cards, maps, and stories.
- Kid-safe design with LED eyes for fun play.
- USB rechargeable with 3–4 hours runtime.
- Supports card-based commands for logic, loops, events, and sequences.
- Engages kids with real-time lights, sounds, and animated feedback for fun learning.

Genie 2110

Specification :

- Controller: 1 input, 2 outputs, 1 charging port (5V); 430 mAh battery
- Sensors: Infrared and photosensitive sensors (1 each)
- Actuators: Red light, buzzer, forward/reverse motor, speed control, and logic modules (OR, AND, NOT) Structural parts: ≥ 137 pcs, ≥ 38 types
- Transmission parts: 9 gears in 5 types
- Motors: speed regulating smart motor on both sides

Genie 2120

Specification :

- Controller: Integrated, 2 motors, LEDs, speaker, 1500 mAh battery, Type-C, 2.4 GHz, Bluetooth
- Coding Pen: OID sensor, 430 mAh battery
- Coding Cards: 52
- Sensors: Ultrasonic x1, Motor: Interactive motor x1,
- Assemble part: ≥ 131 pcs, ≥ 34 types

KITS OVERVIEW

Genie 1930

Specification :

- Controller: 32-bit, 2 motors (5V), 3 lights, speaker, 780 mAh battery
- Programming: Coding pad, handheld, 72 buttons, 100+ commands, bluetooth
- Sensor: 5-channel grayscale
- Actuator: 1 intelligent motor, working voltage 5V
- Parts: 135+, 10mm standard, screwless
- Motor: Interactive x1
- Transmission parts: 3 types of gears

Genie ZDW

Specification :

- Offers learning in both mechanical design and electronic control.
- Covers real concepts like motion, energy, and circuit systems.
- Helps kids explore sensors and how robots sense the environment.
- Enhances logical thinking and programming skills using Python and D&D (Drag and Drop).
- Comes with 460+ modular parts for creative robot building.

Genie EI 119

Specification :

- Controller: ARM Cortex-M3, 32-bit, 13 interfaces
- Sensors: IR and touch sensors
- Motors: 3 closed-loop motors
- Parts: 602+ pieces, 3+ projects
- Transmission: 5 types
- Programming: C, Python, Edugenie D&D

KITS OVERVIEW

Genie 519

Specification :

- Controller: 240 MHz, 4M flash, Bluetooth, LCD, 16 I/O
- Parts: 520+ components, 37+ types, Transmission: 10 gear types, 35 gears
- Sensors: Color, ultrasonic, temp/humidity, rotary, gesture, touch, 5-in-1 grayscale
- Actuators: 4 motors, RGB lights, dot matrix screens
- Power: 7.4V 1500mAh lithium battery
- Programming: C, Python, Edugenie D&D

Genie ZIS

Specification :

- Controller: E6RCU cortex-M4 chip
- Motors: 2 large, 1 medium motors
- Sensors: AI vision, ultrasonic, 2 photoelectric, color, 2 touch
- Actuators: 1 LED module
- Parts: 620 blocks (10mm)
- Programming: Edugenie D&D, python

KITS OVERVIEW

GENIE ZCE

Specification :

- Blocks : 492 pcs (10mm)
- Extension set for Edugenie Genie ZIS kit without controller, provides rich building blocks, such as racks, chain, universal joints, large plates, wheels, rubik's cube etc., that can build more models

GENIE ZAS

Specification :

- H-RCU: 12 sensor ports, 2G RAM, 16G ROM, 4" screen, 8-core processor
- Motor: High torque, precision, stall protection
- Camera: 2MP, 30FPS, universal cable compatible
- Ultrasonic Sensor: LED, high accuracy, anti-interference.
- Touch Sensor: High sensitivity, durable
- Photoelectric Sensor: Quick response, daylight resistant
- Color Sensor: RGB data, 6 colors, auto white balance.
- Color Lamp: 7 colors, low power
- Programming : Python

PATENTED SOFTWARE

- Our patented drag-and-drop platform making robotics coding easy, intuitive, and beginner-friendly.
- Learners build robot behaviors visually while C and Python code is generated automatically in parallel.

- It supports 10+ languages, bridging visual programming with real-world coding for learners worldwide.

TECHNOLOGY ECOSYSTEM

Modular robotics platforms (sensors, controllers, programmable modules)

Coding environments: Block Coding, Arduino IDE, Python, AI/ML platforms

Digital Fabrication tools – 3D printers, design software

Safety Infrastructure: goggles, soldering zones, secure testing areas

SCHOOL ROBOTIC LABSETUP

- Workstations for building and assembling robotic models
- Programming stations with networked computers/laptops for coding and simulations
- Networked computers/laptops for coding & simulations

**Computational
Thinking &
Programming - Block-
based → Python →
AI/ML**

**Engineering Design
Process – ideation,
prototyping, testing,
iteration**

**Critical Thinking &
Problem-Solving
through
interdisciplinary
projects**

**Emerging Technology
Exposure – drones,
IoT, automation**

What Makes EduGenie Different

Sustainability in Learning

EduGenie's modular robotics kits are reusable and scalable, ensuring long-term value and sustainability for schools.

Learning Beyond the Classroom

Students continue exploring innovation through guided projects, simulations, and creative challenges even outside regular class hours.

Inclusive & Flexible Programs

Our offerings are customized for different age groups, skill levels, and school requirements, ensuring no learner is left behind.

Key Differentiators

Future-focused robotics
and STEM curriculum

Flexible and customizable
learning modules

Training delivered by
industry practitioners and
educators

Passion-driven educator
and mentor network

Integrated software and
learning platforms

Affordable and scalable
school solutions

Dedicated academic and
technical support

Our Ideal School Partners

EduGenie Labs collaborates with institutions that aim to stay ahead in education, including:

- **Progressive schools** embracing STEM and innovation
- **School managements** seeking modern learning differentiation
- **Principals and educators** focused on student skill development
- **Institutions** aspiring to build technology-driven academic excellence
